MAIN TITLE:

✓ "THE ROCKY MOUNTAINS"

Produced and Distributed by Ford Motion
Picture Laboratories
Copyrighted 1922 by Ford Motor Company. ✓

SUB-TITLES:

1. The Rocky Mountains have many ranges which extend across our country from Canada to Mexico. Study this map of the Rocky Mountains and see the parts we will visit.
2. The highest part of the Rockies is in Colorado. Looking north at the Continental Divide from Pikes Peak. Why are the slopes so bare?
3. Mountain traveling is difficult. The Rocky Mountains are barriers between the East and West.
4. We select for traveling the passes, the gorges and the river valleys. Why?
5. In the deep and narrow Royal Gorge of the Arkansas river, the railroad bridge is suspended from the steep sides of the gorge.
6. Even with many deep valleys and gorges, vast sums have been spent for highways across the Rockies.
7. Pike's Peak is on the eastern edge of the Rocky Mountain highland. It can be seen for 100 miles by travelers on the plains.
8. In the Garden of the Gods near Colorado Springs, nature has formed many irregular masses of rock.
9. The rocks in the Garden of the Gods have been eroded into many shapes of gigantic size. These are the Cathedral Spires.
10. The Balanced Rock is a great mass which was left as the surrounding rock was worn away.
11. Sixty valley glaciers are found in the Glacier National Park.
12. Glacier National Park with its rugged peaks, beautiful lakes and massive mountains is the Switzerland of the Rockies.
13. Yellowstone Park is larger than the State of Delaware. Its seventy geysers or water volcanoes are due to former volcanic action.
14. Old Faithful is the most regular of all the geysers.
15. The wild animals of the Rockies are now carefully protected in their native haunts. Thousands of bison once roamed the Foot Hills. This buffalo is one from the few remaining herds.
16. In the north the caribou and the Rocky Mountain goat are common.

(#2 - The Rocky Mountains)

17. Elk and deer are tame in Yellowstone Park.
18. The black bear is more plentiful and better acquainted with us than the other wild animals of the Rockies.
19. The eagle selects the highest cliffs for its nest.
20. The porcupine is common on the timbered slopes.
21. This small animal is respected. Do you see why?
22. On some of the remote streams, beavers are busy at work.
23. Mining of precious metal is the chief industry in the Rockies. Silver and gold are mined at Leadville and Cripple Creek.
24. In the deep narrow valleys the streams are dammed to store water for irrigation.
25. The melting snow fills these great reservoirs which supply the water to irrigate large tracts of land.
26. Denver is the metropolis of the Rocky Mountains. It has grown from a supply camp for mines to the capital of Colorado.
27. On the Capitol steps in Denver we are just one mile above the sea. The clear air enables us to see mountain ranges fifty to one hundred miles distant.
28. Manitou is a small mountain resort at the base of Pike's Peak. The cog railroad to the summit of this peak begins here.
29. Santa Fe, in the southern part of the Rockies is an old Spanish city.
30. The Rocky Mountains are the backbone of the American continent. Their rugged peaks and massive ranges are master pieces of erosion.

THE END.
